Summary

Software Engineering undergraduate at SLIIT with hands-on experience building full-stack applications using Java Spring Boot, React, Node.js and PostgreSQL/MongoDB. 1st Runners Up at SLIIT Codefest 2025 and HackX national finalist, with projects spanning web, mobile and microservices architectures.

Education

Sri Lanka Institute of Information Technology (SLIIT)

Oct 2023 – present

BSc (Hons) in Information Technology, Specializing in Software Engineering | CGPA 3.01

Mahanama College (Colombo) G.C.E. Advanced Level (Maths Science Stream)

Feb 2022

Skills

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, Bash

Frameworks & Libraries: Spring Boot, React, React Native, Next.js, Node.js, Express.js, JSP, Servlets, Tailwind CSS

Databases: MySQL, PostgreSQL, MongoDB, SQLite

Tools & Platforms: Git, GitHub, Github Actions, Docker, Kubernetes, Vercel, Render, Postman, Apache Tomcat, Electron, Expo, Android Studio, Figma

Projects & Experience

RedLink - Blood Donor Matching System

Sep 2026 – Ongoing

Tech Stack: React, TypeScript, Java, Spring Boot, PostgreSQL, JWT, REST API, Docker, Git, Github Actions | **GitHub Repository:** [Link](#)

- Building a system that **finds and ranks suitable blood** donors for a hospital's urgent request in seconds, replacing manual phone calls.
- Created **role-based** access for admins, hospital staff, and donors, with donor contact details shared only after a donor accepts.
- Developing and testing **secure REST APIs** and **deploying the full application live on the cloud with automated CI/CD**.

ResQ - National Disaster Platform | SLIIT Codefest ReviveNation – 1st Runners Up

Jul 2025 – Aug 2025

Tech Stack: Node.js, Express, MongoDB, Mongoose, React, React Native, TypeScript, Recharts, Tailwind CSS, JWT | **GitHub Repository:** [Link](#)

- Developed a **full-stack MERN web app** and a **companion React Native mobile app** for **real-time** disaster alerts, SOS requests, resource coordination and responder assignment.
- A lightweight prototype was tested during **cyclone emergency-response simulations**.
- Collaborated with Ministry of Digital Economy and ICTA to integrate **government APIs** (SLUDI, Commercial Bank PayDPI, mock NDX) for disaster data, payments, and inter-agency coordination.

ZFit - Gym Management System

Jul 2025 – Oct 2025

Tech Stack: Next.js, React, Node.js, Express.js, MongoDB, Tailwind CSS, JWT, PayHere, REST API, TypeScript, Git | **GitHub Repository:** [Link](#)

- Built a **full-stack gym management platform** with dedicated modules for payments, invoicing, and refunds, streamlining end-to-end financial operations.
- Built responsive, **role-based member dashboards** displaying attendance logs, payment history, and personal profile data.
- Integrated the **PayHere payment gateway** with JWT-secured REST APIs to enable secure, automated subscription billing and renewals.

eDoc - Smart Healthcare Platform (Microservice)

Feb 2026 – Apr 2026

Tech Stack: Spring Boot, Java, Docker, Kubernetes | **GitHub Repository:** [Link](#)

- Developed a cloud-native telemedicine platform for patient management and healthcare services.
- Designed and implemented the Patient Management Service for profile management and medical report handling.
- Built a Notification Service for real-time email and SMS alerts.
- Developed RESTful APIs with Spring Boot following microservices architecture principles.

Ceylon Smart Citizen (Tech-Triathlon by Rootcode)

Jul 2025 – Aug 2025

Technologies: Node.js, Express, PostgreSQL, Next.js, Docker, Python, pandas, scikit-learn, NumPy, joblib | **GitHub Repository:** [Link](#)

- Engineered a full-stack digital governance platform featuring a **secure microservices backend** and an ML-powered resource optimization pipeline, consolidating 20+ services.
- Developed two ML models; **Service Time Prediction** (HistGradientBoostingRegressor), **Staffing Forecast** (RandomForestRegressor)

StockUp - Cross Platform Inventory Management System

Apr 2026

Tech Stack: React, TypeScript, Electron, React Native, Expo, SQLite, Tailwind CSS, Vite, Git | **GitHub Repository:** [Link](#)

- Architected a **cross-platform inventory management system** with dedicated **desktop (Electron)** and **mobile (React Native/Expo)** clients sharing a common offline-first data layer.
- Designed responsive, platform-specific UIs with Tailwind CSS, optimizing layouts and interactions separately for desktop and mobile form factors.
- Built an embedded **SQLite data layer** (better-sqlite3 / expo-sqlite) enabling full inventory tracking, search, and validation without dependency on a remote backend.

Achievements & Certifications

- 1st Runners Up** – SLIIT Codefest 2025 Revivenation competition
- HackX National Hackathon Finalist** – University of Kelaniya and Ministry of Science and Technology
- AI / ML Engineer stage 1** – SLIIT | **Getting started with Docker**
